Judging Scorecard

Judge: _____ Team / Project: _____ Date: _____

ID / Criterion	What judges assess	Max Points	Score
Common Criteria (E1-E7)			
E1 | Problem framing and decision relevance	Identifies the user, decision, consequences, assumptions, and a measurable definition of success.	10	_____ / 10
E2 | Working prototype and purposeful AI use	Demonstrates a functioning artifact with a clear AI role, a suitable comparator, and a repeatable execution path.	15	_____ / 15
E3 | Evaluation quality and evidence	Uses fair comparisons, appropriate metrics and denominators, protected evaluation data, and honest uncertainty and failure analysis.	20	_____ / 20
E4 | Human oversight, explainability, and workload	Shows who reviews outputs, when to defer, how corrections work, and the effect on understanding, trust, and human effort.	15	_____ / 15
E5 | Responsible AI and data governance	Documents provenance, permitted use, privacy, bias risks, accountability, and limits on operational use.	10	_____ / 10
E6 | Feasible next step	Recommends stop, iterate, controlled pilot, or follow-on work with evidence, an owner, and practical resource and approval needs.	5	_____ / 5
E7 | Communication and reproducibility	Presents findings clearly and supplies the versions, setup, artifacts, and limitations needed to inspect or repeat the work.	5	_____ / 5
Subtotal		**80**	_____ **/ 80**
ACC/ST Case Criteria (C1-C4)			
C1 | Staleness: cause and effect	Shows when information becomes stale, where it enters the algorithm, and why it changes outputs or decisions.	5	_____ / 5
C2 | Low quality and source-volume effects	Explains a specific quality failure and tests how prevalence, repetition, or unequal source volume changes its influence.	5	_____ / 5
C3 | Over-time behavior and interaction	Separates stale-only, low-quality-only, and combined effects across an ordered timeline or documented simulated progression.	5	_____ / 5
C4 | Countermeasure effectiveness and limits	Demonstrates the correction against the same baseline, including a new condition, normal-data tradeoffs, and a failure or limitation.	5	_____ / 5
Subtotal		**20**	_____ **/ 20**
TOTAL SCORE		**100**	_____ **/ 100**
